

Recreation Facilities Asset Management (RFAM) Software Program Provided Free as Benefit of RFP Membership

The Alberta Association Recreation Facility (AARFP), in collaboration with the Ontario Recreation Facility Association (ORFA), and Marmak Information Technologies has customized a user-friendly software application called Recreation Facilities Asset Management (RFAM) based on Ontario's successful Municipal DataWorks (MDW) asset repository program.

"This new software application will greatly assist recreation facility professionals in the collection and management of recreation facility assets data and is available for free as a service to all AARFP members" says, Russ Tanner, AARFP's President.

According to Stuart Ray, AARFP Executive Director, "AARFP is delighted to partner with both the ORFA, who have a very long and strong history of providing training and services to recreation facilities, as well as with Marmak, who provides a citizen engagement portal as part of a broad range of cost effective municipal web-based solutions and services."

The RFAM application has been in development over the last year and has been enhanced with feedback provided from members of ORFA's Technical Advisory Committees as well as pilot users from towns throughout Ontario.

RFAM includes modules that will assist with:

- Recreation facility infrastructure inventory (available to individual members)
- Asset components, condition and life expectancy (available to facility members)
- Integration to FieldCrew and the ability to create and manage custom inspections
- Integration to ComTrack and the ability to create and manage work orders
- Both standard and custom reports

AARFP is pleased to announce that the RFAM program is now officially available for access and will be demonstrated at the 41 Annual Conference in Banff, AB, April 15-18, 2018.

Interested members will be serviced on a first come, first served basis through Marmak (www.marmak.ca).
