Program Highlights

The Recreation Facility Management Certificate program was developed in partnership between Red Deer Polytechnic and Alberta Association of Recreation Facility Personnel (AARFP), in order to deliver technical and management skills specific to the recreation industry to aspiring supervisors and managers, and those with less than 5 years' experience in a management role.

The Management Skills for Supervisors Certificate through Red Deer Polytechnic provides the theory and skills to effectively move into a higher supervisory/management role, while the technical training for facility operations offered by the AARFP will help you develop a comprehensive understanding of Recreational Facility operations. After completing this certificate, you will recognize your style of management, be able to manage difficult situations, and create efficiencies that will aid your patrons, your team, and enhance the bottom-line.
